

**BOOST-OVERDRIVE****The Jan Ray Based on VEMURAM JAN RAY (JAPAN) . .  
OVERVIEW**

The Jan Ray was designed to recreate the punchy clear tone of the Blackface Fender amps from the 60's. So-called the "Fender Magic 6" sound. An easy to handle overdrive keeping the characteristics of the guitar, with great sustain without any unnatural compression.

**FOOTSWITCH** toggles effect on/bypass  
(blue LED indicates on)

**VOLUME** knob adjusts overall volume of effect

**BASS** knob cuts low end frequencies

**GAIN** knob adjusts overdrive intensity

**TREBLE** knob cuts high end frequencies from  
post-overdrive signal

**OPERATION:**

Install a 9V battery in the unit (see below) or plug in a suitable 9Vdc, center negative power supply. Plug your guitar into the input jack and connect your amp to the output jack.

True bypass

Input Impedance:400k ohm

Output Impedance:1k ohm

Power Connector:9Vdc, center negative, 2.1mm x 5.5mm

Dimensions:11.5\*6.5\*5.5CM

Weight:0.28KG

**PACKAGING**

1\*JAN RAY
