

# STEEL STRING SUPREME PRODUCT MANUAL

## The SSS Based on Vertex SSS Steel String Supreme. .

The Steel String Supreme (SSS) is an expanded version of our standard Steel String MKII, transforming it into a full-fledged amplifier circuit.

The SSS is a 100% analog solid state preamplifier in-a-box with an independent EQ section and five additional tone-shaping controls beyond it's little brother, the Steel String MKII. The SSS is designed to go direct (DI) into your mixer/interface, OR into your digital modeling amplifier (ex. Kemper, Line 6, Headrush) to impart "tube" warmth and transients, OR in front of your tube amplifier. No matter how you run it, the SSS delivers on its heritage, bringing the 3D clean and edge-of-breakup tones we expect from a D\* style amplifier.

## Features:

- Based on model #001 of an original run of legendary 6L6 blues machines
- A true amp in a box — designed to go into tube amp or direct to Cab Sim/IR Loader
- Inspiring touch sensitivity, warmth, and sparkle
- Versatile Gain and Level controls make this a capable clean boost or full-on overdrive
- Active EQ, Bright/Deep switch, and Rock/Jazz switch supply plenty of tone-shaping potential
- Rugged metal housing
- Authentic D-style labels
- True bypass switching preserves your signal between uses

## Specisications

- Controls** Output, Fat, Clean, Level, Filter, Gain, Bright/Deep, Jazz/Rock
- Connections** Input, Output, 9VDC
- Dimensions (MM)** 120 x 95 x 36mm
- Power Connector** 2.1mm barrel (center negative)
- Input Z** 2.2M ohms
- Output Z** 10K ohms
- Power** 8.0-9.6V [9.8V MAX] standard polarity
- Current** ~20mA
