

Overdrive Pro Ts808 And Ts9

Both RED AND GREEN Tube Screamer versions of our company have been highly praised by everyone. However, unfortunately, due to some troubles in the name of our product TUBE SCREAMER, our company has decided to change the names of our products to TS GREEN AND TS RED II respectively

Our TS Series is based on Ibanez Tube Screamer that is one of the most emulated circuit designs of all time and has been pushing amplifiers since it was first released in the late 1970s.

Combined with the classic TS9 and 808 circuits, it is controlled with a toggle switch
