

## Based on Pro Co Sound Fat Rat Distortion Pedal

### Product description

Designed for electric guitarists, the Fat Mouse is a distortion pedal that builds upon the design of the original, well-regarded Rat by adding a switchable mosfet/germanium clipping circuit. So, with the flick of a switch, you can effect the original rat tone, or get the more scooped, smooth, and amp-like tone of the mosfet/germanium clipping section. You'll also note the Fat switch, which offers a bass boost and high cut at the same time, tailoring the pedal for lower tunings or bass guitars. Besides the two aforementioned switches, the Fat Mouse gives you a Distortion knob, a filter knob, an overall volume control, and a bypass/engage footswitch. A 1/4" instrument input and output are offered for your guitar, and the pedal is powered by DC 9V power adapter.
