

Based on Hermida Zendrive

Four knobs control the overall volume, gain, tone and voicing of the pedal. At lower settings, the pedal offers extremely light overdrive sounds reminiscent of tube amps set near the "sweet spot." At higher settings, the Zdrive increases in gain and sustain, producing tasty overdrive and low distortion tones. FEATURES Smooth, round, balanced, low-to-medium gain overdrive Slight overdrive to mild distortion Great dynamic response and open sound Connector

PANEL FUNCTION

**CONTROLS:**

VOLUME: Moving the knob clockwise increases the amount of "master volume" output coming from the pedal.

GAIN : Moving the knob clockwise increases the amount of clipping gain, or "distortion" coming from the pedal.

TONE : Moving the knob clockwise changes the tone (increased treble) after being clipped (gain added) by op-amp.

VOICE: Moving the knob clockwise changes the tone (increased treble) of the signal before being clipped (gain added) by the op-amps.

**INPUT
OUTPUT
9V DC POWER JACK**

SPECIFICATION

True Reproduction of A Very "Zen" Overdrive Known For Legendary Amplifier Tones. Premium components that match the original: 2N7000 MOSFETS, a NE5532 Op-Amp and Schittky BAT41 diodes.

True Bypass

Volume, Tone, Gain, and Voice Controls

Authentic Metal Enclosure with Carefully Tapered Knobs
1/4" Input (Inst) And (Amp) Jacks

Powered By 9v DC Centre Negative

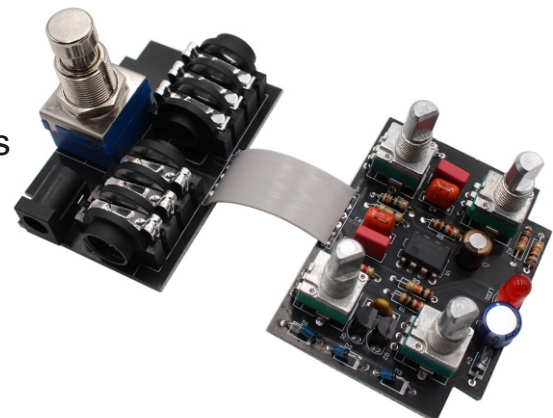

Power Consumption: 25mA

Length: 12cm

Width: 7cm

Height: 5cm

Weight: 280g
